

# Chart Your School Curriculum

by Ramona Kerby

Plain and simple—you have to know the school curriculum, or you can't buy appropriate materials that support student learning.

Committees write curriculum guides and you can usually bet on one thing—the language is going to be cumbersome, excessive, and convoluted. That's not always true, but if you pick up the district's curriculum notebooks and they are very heavy, I've just proved my point.

Your goal as the school library media specialist is to know what every teacher in your building teaches, i.e., know what the district expects the instructor to teach and what he or she actually teaches. You don't have to know enough actually to teach frog dissection, basketball jump shots, or the specifics of reconstruction, but you should know the topics.

What you really need is a one-page summary chart of the curriculum by subject and grade level. Where do you get it? You make it yourself. Get every grade level curriculum guide, or if you are in a middle school, look at subject area curriculum guides and jot down the topics that are taught.

You'll find some vague topics such as "writing process" or "solving problems." Don't include them. They don't clarify what you need to purchase. Do your best to choose clearly defined topics such as American explorers, World War I, animals, plants, etc. Remember that the purpose of your curriculum chart is to make sense out of those notebooks.

For each grade level and subject area, select five to ten topics. In language arts, specify the kinds of literature taught. By all means, make your curriculum chart a little heavier in social studies and science. It's nice to include art, music, physical education, and maybe even library on your chart. Here again, be as specific as possible. Include the names of specific sports, musical composers, and artistic media. After you've jotted down the major units of study, ask one

or two teachers in each grade level or subject area to look over your topics to see if you've missed anything. This won't take them long to do, so bring it with you to lunch or ask them to look over it while they're on playground duty. Don't put the list in their mailbox. They'll get busy and forget to return it to you. Show them the list while you stand there and breathe down their backs. If you mention that you have money to spend on materials for them, they'll help you.

While you're standing there, ask how the unit is taught. What types of assignments are given? If students do group reports, then you might not need as many items. If students do individual projects, you'll need more items. Ask how long the unit lasts. If the teacher plans a two-week unit for the students to research and write reports on space, then you need lots of materials. If the teacher briefly covers magnetism, you don't need as many items. Ask when the unit is taught during the year. This information will help you decide what to place on the next order. Also ask if there are any specific library information skills to teach in conjunction with the unit.

Of course, you can make a pretty little questionnaire that asks these same questions—what, how many, and when—and then tabulate the responses, but you're missing a key opportunity. Talking to your teachers face to face gives you the opportunity to listen, plan, and collaborate.

Study the examples made by two of my former graduate students. Judy Ward created the elementary chart (page 27) and as soon as she shared it with her administrators, they distributed it to every elementary school teacher in the district. Several years ago, Cindy Stull created the middle school chart (page 28). She periodically updates it as it still is used in her building.

Use either word-processing or spreadsheet software. Once you get a copy suitable for photocopying, you may consider formatting it as a Web document later. But, don't make this project so overwhelming that you never complete it. Give yourself a month and work on it when you have a minute or on a couple of weekends. Get it finished!

Ramona Kerby, Ph.D., is Coordinator of the School Library Media Graduate Program at Western Maryland College in Westminster, MD.

**DORCHESTER COUNTY CORE KNOWLEDGE CURRICULUM**

Subject	Kindergarten	First	Second	Third	Fourth	Fifth
Language Arts	Mother Goose Fairy Tales Aesop's Fables American Legends Tall Tales	Poems Folktales Aesop's Fables Different lands, similar stories Drama Heroes	Poems Folktales China/Japan Greek Mythology Tall Tales Limericks Drama	Poems Norse Myths Myths & Legends Biography Autobiography Fiction Nonfiction	Poems Folktales Speeches King Arthur Novel Short Story Plot/Setting	Tom Sawyer Don Quixote Shakespeare Trickster Tales Gettysburg Address Sounds in Poetry

Music	Instruments Bach Herbert Mozart Saint-Saens	Orchestra Classical Music Opera Ballet Jazz	Strings Percussion Keyboards Vocal Instrumental Dance	Orchestra Brass Woodwinds Listening	Vocal Ranges Gregorian Chants Haydn Mozart Strauss	Jazz African American Ragtime Renaissance

While your chart will reflect the district and/or state curriculum, tailor-make it to your own building. Include the name of the school. The primary reason you are making this chart is so that you will learn the curriculum as well as having an easy-to-read buying guide for selecting materials. A powerful secondary reason is that your faculty and parents will want a copy of it.

Surprisingly, many teachers don't know what else is taught in their building. This goes for parents as well. Your **one-page curriculum chart** can be taped to the kitchen refrigerator. If loved ones need suggestions on what books to buy, what books to check out from the public library, or what topics to discuss at the supper table, a quick glance at the chart saves the day. It is to be hoped that when you show the chart to your principal, he or she will want to share it with the faculty and parents.

Post your chart somewhere in the library media center. Bring a copy with you the next time you visit the exhibits at a professional conference. After all, you'll be fulfilling your role as the curriculum leader of the building.

—Continued

### Curriculum Chart Evaluation

- Have you included your name, the date, and the school's name?
- Is the chart one page, or two pages at most?
- Are the topics one or two words?
- Are the topics listed, not grouped together in paragraph form?
- Have you deleted vague topics such as "Language Experience" or "Problem Solving"? These topics won't help you purchase materials.
- Is the formatting consistent throughout the chart?
- Are there approximately the same number of topics in all the grids?
- Has a small easy-to-read font been used?
- Is there plenty of white space?
- Are all the words spelled correctly?
- If you prepared your chart in color, have you also prepared one in black and white that will photocopy nicely for teachers or parents?
- Does the chart look professional?

## WALKERSVILLE MIDDLE SCHOOL CURRICULUM

Subject	Grade 6	Grade 7	Grade 8
LANGUAGE ARTS	History and Literature of African Americans Research of Authors and Poets Newbery Award Winning Novels Grammar and Writing	Search for Values <i>Summer of My German Soldier</i> <i>Witch of Blackbird Pond</i> Poetry Short Stories—E. A. Poe Grammar and Writing	The Holocaust—History and Literature <i>The Diary of Anne Frank</i> Drama— <i>Romeo and Juliet</i> Autobiography and Biography Selected Short Stories and Novels
